Delaware Sediment and Stormwater Regulations (DSSR)

- Volume-based management (1, 10, and 100 year storm events)
- 1 year (2.7” rainfall) has to be infiltrated
- 10 and 100 year can utilize different methods to achieve desired results
TMDL’s

- Have current TMDL obligation in Inland Bays Watershed as per a Pollution Control Strategy (PCS)
- Will have future TMDL obligations as per NPDES Permits
- If achieve infiltration as per (DSSR), then automatically meet TMDL requirements
Watershed Approach

• As per DSSR, can apply in-project trading in each watershed as based on outfalls.
• Accounting is computed by DURMM v.2
• For projects where infiltration is not possible, have options of Fee-in-Lieu or Banking
Fee-in-Lieu

- As per DSSR, if cost is more than $10 /cf than can use fee-in-lieu option
- Money would be paid to DNREC at a price of $18 /cf
- Accounting is computed by DURMM v.2
Banking

- Banking is based on volumetric accounting per watershed
- Current agreement is not yet completed 😞
