

Creating Quality Environmental Documents

- Team effort to gather, reflect and expand on what's working well and why
- Our report contains
 - Summary of core principles
 - Questions and answers (practical advice)
 - Resources and examples

What are we recommending?

- Quality documents should:
 1. Tell the story
 2. Be brief, clear, well “proportioned”
 3. Set out an easy path for legal and technical reviewers to follow
- Teams responsible must have a plan!
 - Develop skills, focus on communicating what’s most important, use graphics, clarify the complex, edit (QA/QC)

Q&A on Content and Process

<p>Is there a recommended organization?</p>	<p>How will the content be different?</p>
<p>What's the recommended process for production?</p>	<p>What are some alternative approaches to format NEPA doc.s?</p>

Now, we need to hear from you

- Today's discussion will help shape the final report
- Circulating to SCOE and others, comments (due Jan. 30)
- Next steps
